

## Review from the Education Technology Guide, Issue 12

### SecureMon - a unique company in the security industry...

SecureMon is a national security engineering company which offers schools unique security solutions based upon years of practical experience in the school environment, designing customised solutions for individual situations. The company's methodology ensures that an extensive, preliminary discussion is conducted with school representatives in order to fully understand the needs and the "wish list" of each school prior to a quote being provided. According to SecureMon's Managing Director, no two SecureMon solutions are the same as each solution is specifically tailored to the individual needs of the school. "Anything less would just be a generic surveillance system." SecureMon selects its products from the best available hardware/software, then integrates and/or develops applications to suit a school's requirements. SecureMon covers all aspects of implementing a security system including security of data, deterrent solutions, assistance with school council and legislative approvals, on-site training and comprehensive after sales maintenance schemes to name just a few. Some unique solutions developed by SecureMon include: number plate recognition, classroom privacy modules, anti-graffiti packages, remote access, remote opening of gates, low light solutions, integration of video surveillance with alarm panels, deterrent schemes and intruder tracking.
