

# Protecting your most valuable asset

## SecureMon™

### The Issues

Schools are often the victims of malicious damage, graffiti, forced entry, vandalism and theft. The safety of staff and students is threatened when crimes are committed on school premises. Educational outcomes are jeopardised when school money is siphoned off for repairs. Inadequate perimeter security places school infrastructure, staff and students at risk.

### Client background

Overnewton Anglican Community College aims to provide accessible, quality education in the northwest of Melbourne. Overnewton Anglican Community College comprises of two campuses, one at Keilor and the other at Taylors Lakes and consists of approximately 2000 students from Preparatory level to Year 12 across these two campuses.

### Challenge

Overnewton aims to encourage and supports its students as individuals to achieve at optimum levels, aspires to maintain a happy, ordered environment and provide infrastructure that meets the requirements of their students. The challenge for SecureMon™ was to provide an adequate, effective and efficient security solution that could monitor and guard Overnewton's infrastructure and assets, which included school computers. SecureMon™ was able to help Overnewton implement this solution in the short timeframe of a two-week school holiday break and before the Year 12's end of year celebrations of Schoolies Week. Additionally, as this was a novel solution for Overnewton, SecureMon™ was able to incorporate an evolving scope.

### The SecureMon™ Solution

Fifty-five cameras were broadly dispersed over the two geographically distinct campuses

- These high resolution external cameras were able to monitor perimeter vulnerabilities
- Vandal-proof internal dome cameras that monitored internal susceptibilities were installed
- 10 Digital Video Recorders were distributed across both campuses and integrated into the existing IT infrastructure and configured for remote monitoring
- Although Overnewton had a local area network (LAN), they preferred not to place video traffic on the LAN, hence an analogue solution was deployed
- Scalable solution enabling future upgrades with minimum complications

### Service & Manufacturing:

# Protecting your most valuable asset

## General aspects of the SecureMon™ Solution

The digital video solution by SecureMon™ provides:

- 24 hour/7 days a week 'peace of mind' surveillance
- Remote access and alert notification
- Access control
- Behaviour recognition
- IP and analogue solutions compatible with existing infrastructure

## General aspects of the SecureMon™ Solution (cont.)

- Infinitely scalable solutions to suit your budget
- Asset protection
- Infinitely scalable solutions to suit your budget
- Asset protection
- Graffiti recognition
- Definable monitoring i.e. alerts for access to specified areas at specified times

## Equipment and Service

- SecureMon™ provides only equipment certified for Australian conditions
- State of the art high-resolution cameras configured for your requirements
- Service Level Agreements comparable to that generally only offered by the IT industry
